

Indoor Air Quality and Air Purification Protocols

Document ID: REF-IND-2024

Source: Indoor Air Protection Bureau

Topic: HEPA Air Purifiers, Ventilation, and Indoor Source Management

Indoor Protection Strategies:

1. Filtration Standards: Use True HEPA air purifiers (H13 or H14 rated) capturing 99.97% of particles down to 0.3 micrometers.
2. Recirculation Mode: Set HVAC systems to internal recirculation during outdoor pollution spikes.
3. Sealing Protocols: Close windows, external doors, and fireplace dampers when outdoor AQI exceeds 100.
4. Indoor Source Avoidance: Do not burn candles, incense, or wood during high outdoor pollution events.
5. MERV Ratings: Install MERV 13 or higher filters in central HVAC heating and cooling systems.
